

WD-HA PRO

Revolutionary Head Alignment Tool for Western Digital HDD

The WD-HA Pro is an essential tool to have when encountering critical head failure with 3.5" Western Digital Desktop Hard Drives. The process is simple: adjust and align HDD heads while scanning with a tool like the Atola Insight.

Micrometer Adjustment

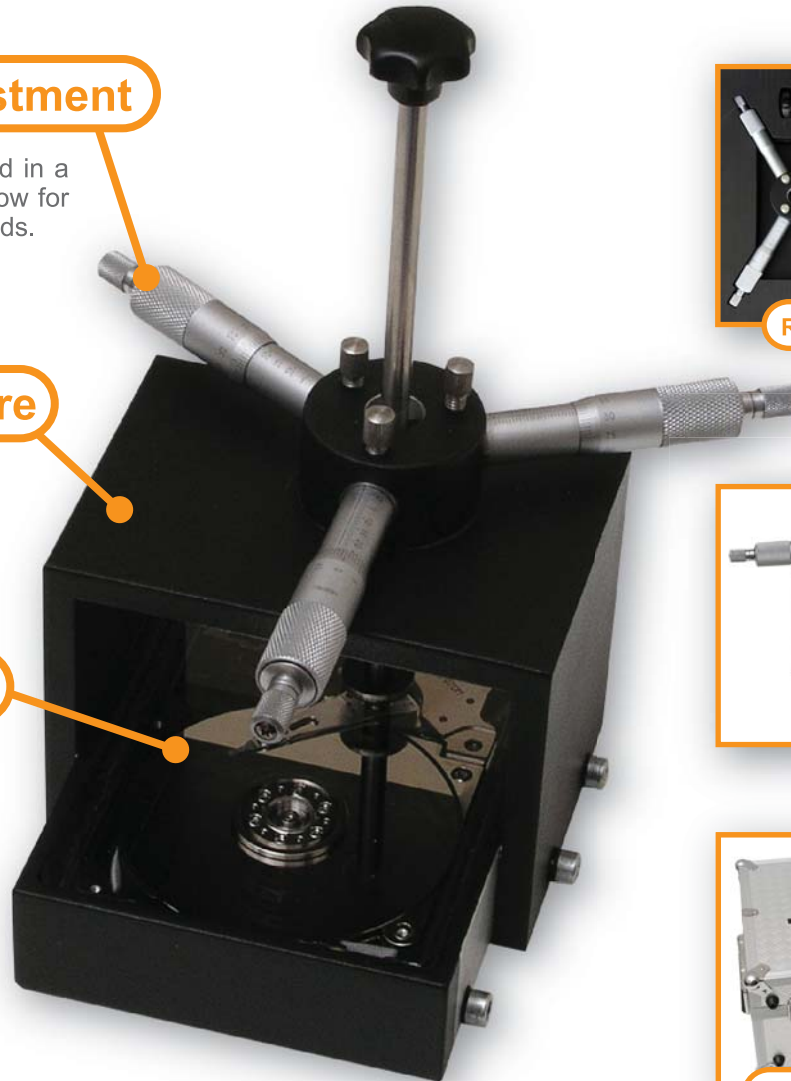

Three micro threads arranged in a circle, 120 degrees apart, allow for precise positioning of the heads.

Sealed Enclosure

The unit enclosure is hermetically sealed to prevent contamination.

Viewing Window

The viewing window enables a recovery technician to see everything that is happening to the physical drive during the alignment process as well as prevents any further damage to the drive.
